DIVISION MEMORANDUM
No. 736 S. 2018

FINANCIAL ASSISTANCE FOR MRS. EMILY Q. BASILISCO

To: Assistant Schools Division Superintendents
CID/SGOD Chiefs
PSDS/DISTRICT OICs
Elementary/Secondary School Heads
Division Office Personnel

1. As per attached letter from Mr. Elias A. Concha, PSPS Argao District informing the field that Mrs. Emily Q. Basilisco, HT-2 of Mabasa Elementary School, Argao District II, was diagnosed of breast cancer (Stage 3-c) on July 2017. She had undergone 7 chemo sessions in the same year and had breast surgery last May 2018. All the while, she was hoping that she was totally cured as she has been religiously taking her maintenance medicines but unfortunately, her latest laboratory results showed her liver is now affected (enlarged) and she was advised by her doctor to undergo another six sessions of chemotherapy.
2. Relative to this, everyone is encouraged to extend their financial assistance, voluntarily, by dropping the same to Ms. Ma. Teresa Peralta, Cashier III, this office.
3. For your information.

DR. RHEA MAR A. ANGTUD
Schools Division Superintendent
Division of Cebu
Sudlon, Lahug
Cebu City

Madam:

Greetings of Peace!

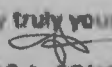

With heart full of pity, I am writing to you because I know how you care for all the members of your DepEd, Cebu Province Family and I have observed how you encourage us to help one another especially when there are co-workers who are in dire need of financial support. You have been a mother to us in so many ways and this has given me the strength to tell you this concern.

In Argao District II, we have one school head named **MRS. EMILY Q. BASILISCO**, HT-2 of Mabasa Elementary School, who was diagnosed of Breast Cancer(Stage 3-C) July of last year (2017). She had undergone 7 chemo sessions in the same year and had breast surgery last May 2018. All the while, she was hoping that she was totally cured as she has been religiously taking her maintenance medicines, but unfortunately, her latest laboratory results (copy attached) showed that her liver is now affected (enlarged) and she is advised by her attending physician, Dr. Dennis Tudtud that to undergo another six (6) sessions of chemotherapy.

Mrs. Basilisco is actually so financially broken this time for obvious reasons. She is so worried as her family can no longer support all her financial/ medical needs and we (in our district) can only do so much to help her. Consequently, I and the district staff decided to request for financial assistance from our fellow workers in the field. I know that whatever amount we can share would mean an extension of Mrs. Basilisco's life, hopefully.

Hoping for your usual consideration and positive action.

Thank you so much and may God bless us always!

Very truly yours,

ELIAS A. CONCHA
District Supervisor

INTERPRETATION

WHOLE ABDOMEN

Ultrasound reveals the liver is enlarged measuring 22.3cm. It exhibits homogeneous echo pattern. There are multiple varicoid hypoechoic nodules and masses noted within the largest in the lateral segment of the left hepatic lobe measures 4.7 x 3.9cm. The intrabiliary ducts are not dilated.

The gallbladder is contracted.

The common duct is not dilated

The pancreas is normal in size. The head, body and tail measures 2.4cm, 2.3cm and 2.9cm, respectively. The pancreatic duct is not dilated. No focal lesions seen.

The spleen is normal in size and echo pattern.

Both kidneys are normal in size and parenchymal echogenicity. The right kidney measures 11.5 x 4.9cm with cortical thickness of 1.5cm while the left kidney measures 12.5 x 6.1cm with cortical thickness of 2.7cm. There is a cystic lesion noted in the left kidney measuring 3.7 x 3.1cm. No associated pericystic dilatation nor stricture noted. No solid nor cystic mass lesion seen in the right kidney.

The filled bladder exhibits unthickened walls with no evident mucosal irregularities noted. No intraluminal echoes seen.

The anteverted uterus is normal in size measuring 6.2 x 4.7 x 2.9cm. The endometrial stripes are intact. No adnexal masses seen.

The abdominal aorta and paraaortic areas appear unremarkable.

IMPRESSION:

1. HEPATOMEGALY WITH MULTIPLE VARICOID NODULES AND MASSES CONSISTENT WITH METASTASIS.
2. CONTRACTED GALLBLADDER.
3. RENAL CYST, LEFT KIDNEY.
4. NORMAL ULTRASOUND OF THE COMMON DUCT, PANCREAS, SPLEEN, RIGHT KIDNEY AND URINARY BLADDER.
5. NORMAL SIZED ANTEVERTED UTERUS.
6. NO ADNEAL MASSES.
7. UNREMARKABLE ABDOMINAL AORTA AND PARAAORTIC AREAS.
